

## Visionet Systems Inc. Expertise in **Microsoft Office SharePoint Server 2007**

### Microsoft Office SharePoint Server (MOSS) 2007

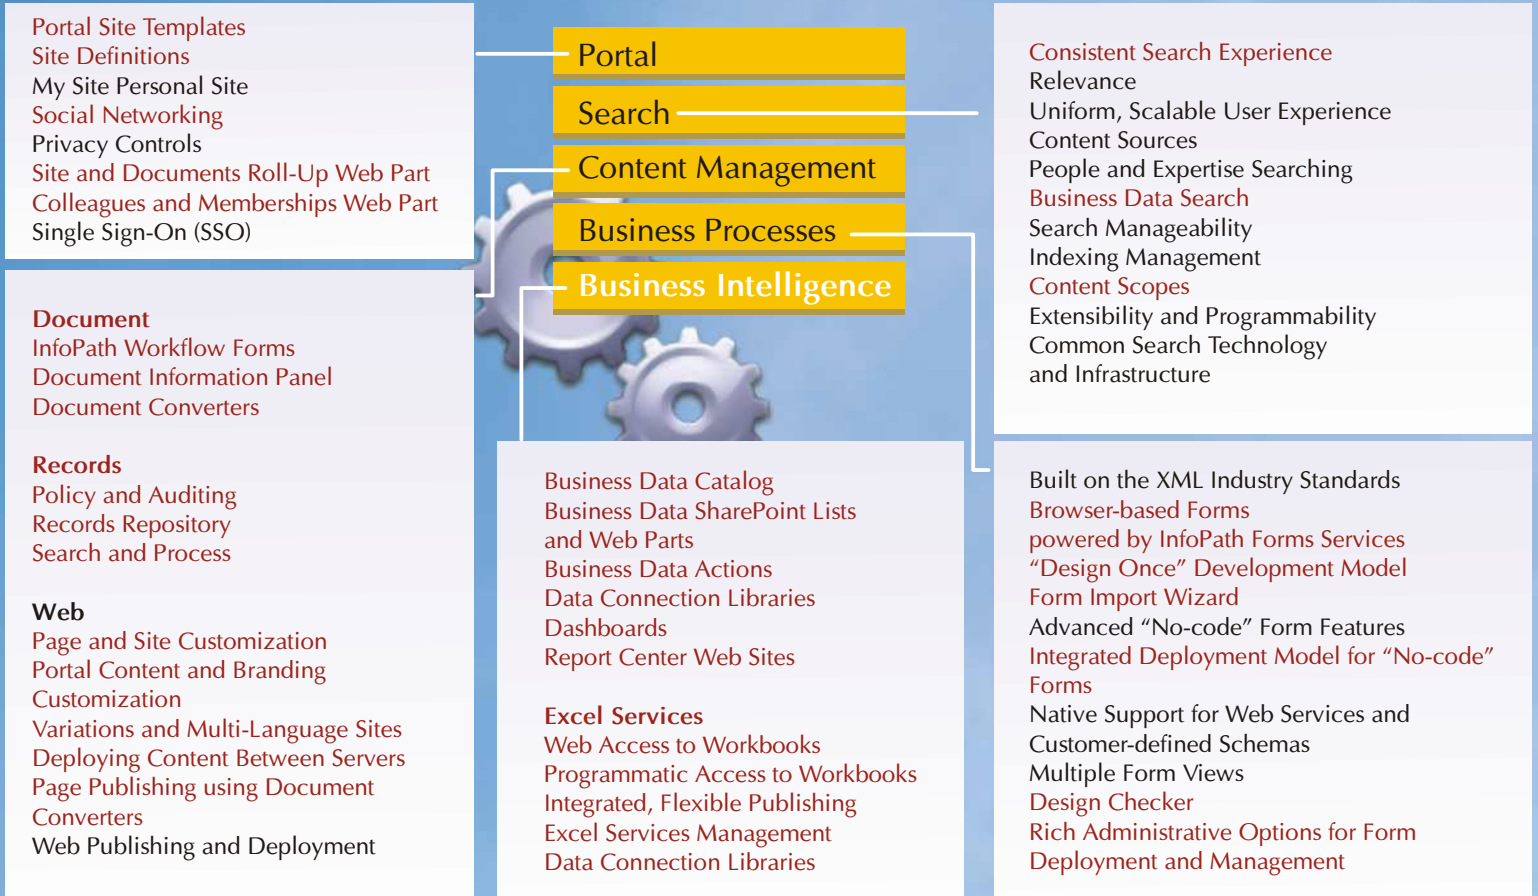

Microsoft Office SharePoint Server (MOSS) 2007 runs on top of WSS 3.0, and builds on it by adding both core features as well as end user web parts to it.

Its main strength is enabling an organization's information to be organized and aggregated in one central, web-based application and provide a taxonomy for corporate data.

MOSS integrates closely with applications in the Microsoft Office suite and adds various features such as hierarchical organization of content areas, enhanced navigation, Single Sign On, personalization features, indexed search, the Business Data Catalog, and in-browser rendering and, in certain cases, editing of Microsoft Office documents.

# MOSS Main Modules & Features

## Microsoft Office SharePoint Server 2007

Feature = New  
 Feature = Enhanced

### Portal

A web site that aims to be an entry point to the World-Wide Web, typically offering search capability and/or links to useful pages, and possibly news or other services. A portal can be organization wide or in some cases global example being MSN, Yahoo, and Google.

#### Hands-on Expertise:

- Identifying and Planning portal architecture
- Creating portal sites
- Managing site structure
- Defining custom site templates
- Customizing Site templates
- Creating My Sites and Profiles
- Managing Site Settings and Features
- Creating Custom Themes

### Search

MOSS 2007 provides a consistent search experience for portal, people and enterprise data using relevance and scoping.

#### Hands-on Expertise:

- Configuring Search Site and Crawling schedules
- Customizing Advance Search
- Write custom web part on crawling database using Share Point web service

### Content Management

Enterprise Content Management is the technologies used to Capture, Manage, Store, Preserve, and Deliver content and documents related to organizational processes.

#### Hands-on Expertise:
